

DigiT — Subscription Models & Pricing

Three tiers, priced and scoped to what DigiT actually is · v2.0

This pricing is built around DigiT's real product — the four workspaces, Smart CRM, and the flagship **AI Intelligence** — not a generic analytics tool. The tiers tell a story: **get started** (one workspace + AI insights), **get the brain** (the full platform + cross-workspace AI Intelligence), and **get everything** (scale, security, autonomous agents). AI Intelligence is deliberately the spine that makes a customer upgrade. Prices are premium-but-accessible for a new AI-native platform, shown in USD for global sale with a dedicated, lower **India plan** in INR.

DigiT — three subscription models

Billed annually (2 months free) · monthly ~20% higher · USD via Stripe globally, INR via Razorpay in India · AI overage metered · excl. GST

Figure 1 — The three subscription models at a glance.

Full feature comparison

What each tier includes, mapped to DigiT's actual capabilities.

	Starter	Professional	Enterprise
Price (USD / mo, billed annually)	\$99	\$399	Custom · from \$1,499
India plan (INR / mo, via Razorpay)	₹3,499	₹14,999	from ₹1,00,000
Workspaces included	1 of 4	3 of 4	All 4
Smart CRM	Core	Full	Full + auto-provision
AI Intelligence	Insights & alerts	The brain: causal reasoning, daily briefings, predictions	+ Agents, simulation, learns-your-business
Team members	5	25	Unlimited (fair-use)
AI actions / month	1,000	10,000	Custom
Workflow automation	Basic	Full (all triggers)	Full + autonomous agents
Universal search	Yes	Yes + semantic	Yes
Analytics & forecasting	Dashboards	+ forecasting, ask-your-data	+ custom
Integrations	Standard	Integration Hub + API	Custom + webhooks
WhatsApp	Lead capture	Capture + nurture	Yes
Roles & access (RBAC)	Basic roles	Full	Advanced
Audit & compliance	Basic log	Full audit + export	+ DPDP data residency, SLA
SSO / SAML	—	—	Yes
White-label	—	—	Yes
On-premise / VPC	—	—	By arrangement (roadmap)
Support	Email	Priority + onboarding	Dedicated CSM, SLA response

The Professional column (shaded) is the “most popular” anchor — it is the first tier with the full AI Intelligence brain, which is the real reason to choose DigiT.

Why these prices

- **Premium, but not BI-priced** — DigiT is an AI-native operational-intelligence platform, not a dashboard tool — so it is priced above commodity analytics, but the \$99 entry keeps it accessible and avoids anchoring too low (low launch prices calcify and are hard to raise).
- **Professional is the heart** — at \$399 it bundles the full platform plus the AI Intelligence brain for mid-market teams — well below enterprise incumbents while far above commodity tools. This is where most customers should land.
- **Enterprise stays custom** — scale, security (SSO, DPDP residency), autonomous agents and white-label are negotiated — and at the enterprise tier Indian budgets approach Western ones, so there is no need to discount.
- **AI Intelligence is the upgrade engine** — insights (Starter) → the brain (Professional) → agents + simulation (Enterprise). Tiering the flagship feature is what pulls customers up the ladder.

The India plan — geo-priced, not converted

Indian B2B buyers pay 50–70% less than Western ones for the same software, so the INR figures are a **separate, lower plan** (billed via Razorpay, gated by location) — not a currency conversion of the USD price. That is why Professional is \$399 globally but ₹14,999 (~\$179) in India. At the enterprise tier the gap narrows, because large Indian firms have Western-scale budgets. This updates the earlier India-only numbers upward (the original ₹2,999 / ₹11,999 under-priced a product this rich); the new India plan is ₹3,499 / ₹14,999 / custom.

Billing mechanics

- **Annual billing** — list prices assume annual (2 months free); monthly billing runs ~20% higher. Annual pulls cash forward — valuable for a bootstrapped founder.
 - **Seats + AI metering** — extra seats beyond the tier cap are an add-on; AI usage above each tier's allowance is metered as overage (protects your margin against heavy users).
 - **Free trial + founding offer** — a 14-day trial, plus a time-boxed “founding customer” discount (30–40% off) for the first 10–20 accounts — win early traction without lowering the list price.
 - **Dual currency** — USD via Stripe internationally, INR via Razorpay domestically; prices exclude 18% GST.
-

Deliverable now vs flagged

Promises to soften before a customer holds you to them.

- **24/7 phone support → priority support with SLA** — you cannot staff a 24/7 phone line solo — promise guaranteed response times instead, add 24/7 phone once you have a team.
- **On-premise → “by arrangement / roadmap”** — full on-prem on a Next.js + Supabase stack is a major lift; offer it by arrangement rather than as a standard checkbox.
- **“Custom AI model training” → “learns your business”** — AI Intelligence learning your patterns and baselines is real and deliverable; per-customer model fine-tuning is a different, costly promise — word it as the former.
- **“Unlimited” → fair-use** — keep an internal soft cap so a heavy customer cannot quietly erode margin.

Note: these are calibrated starting anchors, not fixed prices, and not financial advice. Validate willingness-to-pay with your first design partners and adjust.
